DETAILED ACTION

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 19, 20 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. As stated in the previous action, claims 19 and 23 appear to be duplicates. These are not seen to be duplicates of each other, but rather, 19 is a duplicate of 1 and 23 is a duplicate of 20.

Allowable Subject Matter

4. Claim 6 is allowed.

Claim Rejections - 35 USC § 103

5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1713

7. Claims 1-5 and 7-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patil et al. US 5,609,817.

8. The rejection set forth under 35 USC 103 in the paper mailed 7/18/05 is deemed proper and is herein repeated.

Response to Arguments

9. Applicant's arguments filed 1/23/06 have been fully considered but they are not persuasive.

10. Applicants acknowledge that the Patil et al. patent identifies but that the patent does not provide a suggestion or teaching "as to what the granulometry should be, much less provide teachings or suggestions concerning the claimed amount of 10-2000 μm ." This is not persuasive. The claimed range of granule size between 10 and 2000 μm is very broad and a conventional size when using granules as fillers and polymer modification additives. As such one of ordinary skill would find the use of granules of flour between 10 and 2000 μm obvious. The patent to Patil does not direct one to use granules outside to scope of those claimed. There remains no showing or allegation as to any unexpected results predicated upon the claimed particle size.

11. Applicants then argue that the claims are directed to a mixture of the polymer and flour. This is contrasted with Patil in that the patent teaches graft polymers wherein the flour is grafted with the methyl acrylate. This is not persuasive. The claims read on any trace amount of unreacted flour as well as

the mixture before it is reacted i.e., the intermediate. As such, this limitation is anticipated by the reference.

12. Applicants then argue that the patent refers to various treatments of the starch and that the claims are limited to unmodified starch. This is not persuasive. The reference identifies unmodified starch at column 4 lines 3+.

Further, the disclosure of the patent is not limited by the examples.

Conclusion

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
